 BurnBar

 grok"D"

 BurnBar

 ×  Imagine That overlay for Grok Bot

grok"D"

Unified Multi-Seat, BurnBar Bridge & Local Agent Runtime

Powered by  •  • **Imagine That BurnBar Bridge**

Multi-account switching, local inference, and our companion **iPhone App**.

Dual-Engine & BurnBar Bridge Topology

Grok"D" connects **SPACE**, multi-seat routing, and the **Imagine That BurnBar Bridge (:8320)** into one unified runtime.

RUNTIME & BRIDGE TOPOLOGY

BURNBAR BRIDGE ACTIVE

1. Command Presentation & Multi-Seat Layer (Seat 4)

Runs under GrokBotSeat4. Isolates database sessions without disturbing official **SPACE** or instances.

2. Gateway Shim & Local Host Daemon (:1337 → :1338)

gateway-shim.js intercepts host traffic, verifies system health, and manages sqlite conversation memory.

3. BurnBar Bridge & Inference Engine (:8787 → :8320 / :8322)

proxy2.js communicates with the **OpenBurnBar Bridge (:8320)** and upstream CLI Proxy (:8322) for local model execution.

Multi-Seat Fleet

Connect multiple team or personal subscriptions. Grok"D" hot-swaps active sessions in milliseconds with zero process restart and zero data loss.

- cursor-a • Primary Seat (100% quota)
- cursor-b • Secondary Backup

BurnBar Neural Bridge

BURNBAR

Uses Apple Silicon Neural Engine. The **BurnBar Bridge** provides fast on-device compute with sub-15ms latency and full privacy.

- Port :8320 OpenBurnBar Bridge Active
- Port :8322 CLI Proxy Connected

Seats, failover, iPhone

When a seat runs out of quota, grok"D" can hop to another account, hand the work to a local bot, or keep going on this Mac.

SUPERPOWER 01

Auto failover

Monitors quota usage and automatically switches fallback paths before exhaustion:

1. Next Account

Rolls auth token to next enrolled
 seat while keeping the chat thread intact.

2. Chief Delegation

Generates a structured
handoff-pack.md briefing and
delegates to Local Chief bot.

3. Exact Clone

Mirrors bot instructions onto
local BurnBar hardware rails to
finish offline.

SUPERPOWER 02

Per-Seat Stop & Routine Guard

Pause automated routines, background cron jobs,
or in-flight agent turns for any specific seat without
disturbing other running bots.

- ✓ Optimistic local save (< 4ms)
- ✓ Async cloud interruption
- ✓ Prevents runaway loops

MOBILE SYNC

CubeLove on iPhone

CubeLove is live on iPhone. grok"D" on the phone
is not yet. Want the TestFlight when it is? Email
alberto@imagine-that.ai.

cubelove.ai

IPHONE

- CubeLove is live now
- grok"D" on iPhone is not yet
- TestFlight: alberto@imagine-that.ai

Keyboard Shortcuts & Fast Action

Tactile shortcuts to control Grok"D" from anywhere on your Mac.

KEYBINDING	ACTION	SCOPE
 	Open Command Cockpit	Universal Palette
  	Force Fall-Over Trigger	Switch to next available tier
 	Hot-Swap Multi-Seat Profile	Cycle Work / Personal / Local D
  	Emergency Freeze / Stop	Halt active seat turns instantly
 	Reload Overlay State	Re-sync menu injection
