 BurnBar

 grok-D

 BurnBar Hub

Unofficial Crossover · Pending Elon seeing my tweet

grok"D"

Unified Multi-Seat, BurnBar Bridge & Local Agent Runtime

Powered by   **Imagine That BurnBar Bridge**

Multi-account switching, local inference, and our companion **iPhone App**.

 

Credit to **Elon Musk** for funding frontier compute and infrastructure.

Cursor Multi-Seat

COMPANION SYNC

Dual-Engine & BurnBar Bridge Topology

Grok"D" connects ,  multi-seat routing, and the **Imagine That BurnBar Bridge (:8320)** into one unified runtime.

RUNTIME & BRIDGE TOPOLOGY

 **BURNBAR BRIDGE ACTIVE**

1. Command Presentation & Multi-Seat Layer (Seat 4)

Runs under GrokBotSeat4. Isolates database sessions without disturbing official  or  instances.

2. Gateway Shim & Local Host Daemon (:1337 → :1338)

gateway-shim.js intercepts host traffic, verifies system health, and manages sqlite conversation memory.

3. BurnBar Bridge & Inference Engine (:8787 → :8320 / :8322)

proxy2.js communicates with the **OpenBurnBar Bridge (:8320)** and upstream CLI Proxy (:8322) for local model execution.

Multi-Seat Fleet

Connect multiple team or personal subscriptions. Grok"D" hot-swaps active sessions in milliseconds with zero process restart and zero data loss.

- cursor-a • Primary Seat (100% quota)
- cursor-b • Secondary Backup

BurnBar Neural Bridge

 **BURNBAR HUB**

Uses Apple Silicon Neural Engine. The **BurnBar Bridge** provides fast on-device compute with sub-15ms latency and full privacy.

- Port :8320 OpenBurnBar Bridge Active
- Port :8322 CLI Proxy Connected

3 Pillars of Flow & Mobile Sync

Eliminates rate-limit interruptions and gives you unified control from Mac and iPhone.

SUPERPOWER 01

Intelligent 3-Mode Auto Fall-Over

Monitors quota usage and automatically switches fallback paths before exhaustion:

1. Next Account

Rolls auth token to next enrolled
 seat while keeping the chat thread intact.

2. Chief Delegation

Generates a structured
handoff-pack.md briefing and
delegates to Local Chief bot.

3. Exact Clone

Mirrors bot instructions onto
local BurnBar hardware rails to
finish offline.

SUPERPOWER 02

Per-Seat Stop & Routine Guard

Pause automated routines, background cron jobs,
or in-flight agent turns for any specific seat
without disturbing other running bots.

- ✓ Optimistic local save (< 4ms)
- ✓ Async cloud interruption
- ✓ Prevents runaway loops

MOBILE SYNC

iPhone Companion & BurnBar CLI

Real-time quota monitoring on iPhone and instant
CLI install:

```
> npm i -g openburnbar
```

NPM CLI

- Real-time quota radar
- Push alerts on quota rollover
- 1-Tap emergency freeze from iPhone

Keyboard Shortcuts & Fast Action

Tactile shortcuts to control Grok"D" from anywhere on your Mac.

KEYBINDING	ACTION	SCOPE
	Open Command Cockpit	Universal Palette
	Force Fall-Over Trigger	Switch to next available tier
	Hot-Swap Multi-Seat Profile	Cycle Work / Personal / Local D
	Emergency Freeze / Stop	Halt active seat turns instantly
	Reload Overlay State	Re-sync menu injection

Port & Daemon Reference

- :1337 — Gateway Shim (Sand Intercept)
- :1338 — Local Execution Host (runbox)
- :8787 — Model Routing Proxy
- :8322 — Upstream CLI Proxy
- :8320 — OpenBurnBar Bridge
